PROFILE

Developer with freelance experience and a background in building independent products. Work spans interface design, frontend, backend, integrations and infrastructure. In the final semester of Systems Analysis and Development, seeking to contribute to an engineering team and grow through collaboration and technical review.

TECHNOLOGIES

React / Next.js · TypeScript · Go / Gin · Fastify / Prisma · Godot / C#

PostgreSQL · Redis / NATS · APIs / WebSocket · Docker / Linux · Supabase · Stripe

EXPERIENCE AND PROJECTS

Zapyflow | Founder and Developer

Independent product under ongoing development

- Built a WhatsApp support and automation platform with a CRM and visual workflow editor using React/TypeScript.
- Fastify API, Prisma persistence and WhatsApp Cloud API integration; AI workflows, a knowledge base and handoff to human operators.

Vettano | Founder and Developer

Independent product | Reboot and redesign in progress

- Go services for authentication, lobbies, matches and social features, with PostgreSQL, Redis and NATS.
- Previous React client; migration to Godot/C# is underway, with a redesigned 2.5D visual experience.

Infinity Boost and Kalevo | Partner and Developer

Discontinued commercial projects

- Infinity Boost: marketplace using Next.js and Go/Gin, orders, offers, WebSocket chat and Stripe payment integration.
- Kalevo (formerly Bregashow): events and ticketing platform using Next.js, Supabase/PostgreSQL, Mux streaming and QR-code entry validation.

Freelance Development

2023 - 2025

- Implemented web solutions for client projects, including work related to trading and cryptocurrency tools.
